“An Ounce of Prevention is Worth a Pound of Cure”

Benjamin Franklin

When the water levels fall below normal, this leaves exposed banks that reveals a surplus of untapped nutrients. This nutrient rich area can give new weeds a growth boost. In these times of drought your Spray Tech is doing preventive work, too.

Ponds left untreated have plants that will take advantage of drought conditions to encroach into exposed bank areas and take root. When the water levels return two things will happen.

- 1—Some of these plants will keep growing and be hard to get under control.
- 2—Some drown and die which causes a new problem. When this happens, they release all the nutrients that they were holding. This will create a bright green algae ring around the shore.

In order to prevent future weed growth, we are treating the exposed banks so that when the water levels do come back the weeds will not be there to grow again. Exposed grasses like Slender Spikerush, torpedograss and Eel grass are hard to kill when water levels are normal. This is the best time to get to those and other unwanted vegetation that causes trouble at normal water levels.

Fish also feel the effect of a drought. The water can get too warm and reduce their living space. This puts stress on fish and you may lose a few or the entire pond.

An ounce of prevention—is well worth it!!!

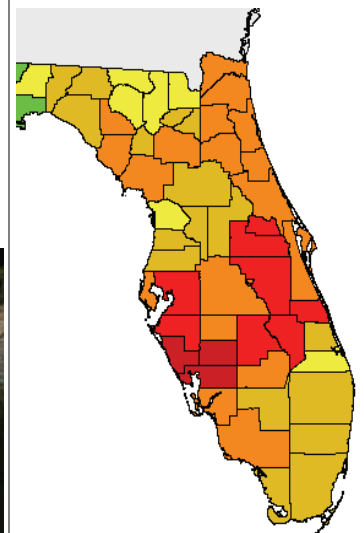

A Tree

“A tree is just a seed that held its ground.”

We started with one person and one goal; to provide service and grow that service into a company. Now, 20 years later, we are still growing thanks to our dedicated employees who provide our customers with the best service. Thank you for being one of hundreds of loyal customers.

We Thank you!

Drought Index 4/26/12

Florida Forest Service

One if by land, two if by sea! The daytime ride of Aquatic Weed Control

The weeds are coming, the weeds are coming!

Listen my customers and you shall hear
Of the daylight ride of a company your revere.
Weeds came by day in broad sunlight
And gave the customers an awful fright.
So through the day they called with alarm,
From every HOA, Apartment Complex and farm.
When customers have needs,
Aquatic Weed Control can take care of the weeds.
