The MASTERS of Aquatics

We are the MASTERS, no "putting" around on this matter. We have been in this sport for over **32** years and we get better with each stroke.

As it warms up all plants will spring to life. Our team of professionals will put on the gloves, with all the right clubs in the bag, to drive away unwanted weeds and encourage the growth of beneficial plants.

One of the first plants to show their benefits will be the pickerel weed plants, which is par for the course. These plants are high on our score card for the following reasons:

- *help catch unwanted nutrients along the shorelines before they get into a waterway, thus preventing weed growth*
- *like full sun*
- *are a good shoreline plant that enjoys very soggy wet soil*
- *grows 3-4 feet tall but only 1-2 feet are visible above the waterline*
- *have 10" long x 5" wide attractive heart-shaped leaves that provide good cover for a wide range of wildlife*
- *their underground roots (rhizomes) allow the plant to spread and send up new stems*
- *clusters of 1/2" flowers grow from June -November, the flower nectar attracts insects, bees and butterflies and the flowers turn into seeds that are eaten by birdies and water fowl*

You'll be able to drive away unwanted weeds when you have the MASTERS of Aquatics install these plants around your waterway.

Let the Masters of Aquatics provide the "heads up" care your waterway needs to score high this coming season!

Insurance certificates will expire May 1st. New ones are being emailed and mailed out during April and May. If you need one and haven't received one in May, please give us a call and we will make sure you get one quickly.
