## The AWC Barber Shop

It's time for an AWC trim. Is your Cordgrass full, long, dry and oversized? Well, an AWC barber can trim it back to a youthful size.

This is the time of the year when Cordgrass has turned brown and looks like straw. Now is the time to cut off the old and let the new green growth take off.

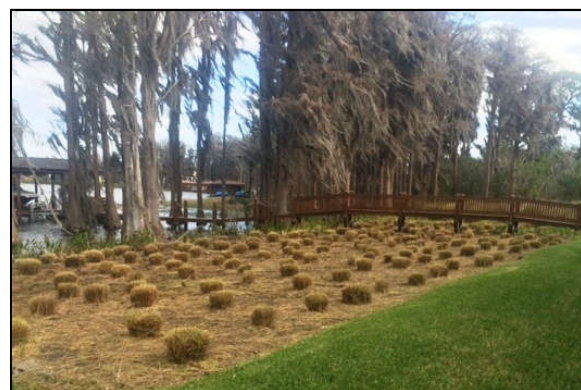

Sand Cordgrass is native to the southeastern coastal states.

- Grows in sandy soil on land and freshwater beaches
- Planted in reclaimed areas, as accents, borders or mass plantings.
- An attractive fountain-looking, free flowing plant
- Can grow from 3 to 5 feet tall
- Flat leaf blades are only about 1/4 inch wide
- Seedheads grow 2 to 8 inches long
- Each plant spreads through the root system and will slowly grow in girth over time.
- Left alone, they can form dense clumps that are 18 to 20 feet in diameter.

Our barbers will not cut this grass before winter because the foliage helps to insulate the plant's crown or core. When they are trimmed back in early spring, new growth can get a head start. If old foliage is left on too long, it can delay the crown's need to get warm and stimulate new growth.

If you would like an AWC barber to trim your Cordgrass, just give us a call. We can give you an estimate for a trim job and leave the clippings there to decay on their own. Or, we can quote a trim with taking away the clippings, leaving a clean, manicured site. It's your choice!

We also plant this grass. We are a full service company and this is just another service offered by your Aquatic Weed Control team.

There was a family that lived by a pond

They had an aquatic company of whom there were not fond.

They got on the web and a search they did try

Looking for a great company and AWC they did spy.

They called and asked for a service guess-ti-ment

Of which we were glad to give a free estimate.

In a matter of days, there was a new bond

with Aquatic Weed Control in charge of their pond.
